Schulze: Radionuklidnachweise und Aktivierungsanalyse

In contrast to the second edition the present one is a collection of contributions by experts from Germany, Austria and Czechoslovakia. Volume II in 16 chapters deals with important and selected methods of Chemical Toxicology, with special reference to the most recent ones. Fundamental theories, applications, apparatus and techniques are described. Systematic separation methods and identification tables are included.

Volume I: Will presumably be published in 1968.

Volume 1 of the new series

Advances in Teratology

Edited by **D. H. M. Woollam**
Emmanuel College
Cambridge, England

Advances in Teratology will provide authoritative reviews of important clinical and experimental aspects of the field and give prominence to new theories devised by experts in various areas of teratology. Volumes in the series will be given over to both genetic and environmental factors implicated in the origin of malformations. Of special note in this first volume is the chapter on the association between drugs and malformations. Other chapters of interest cover viruses and malformations, the immunological aspects of malformations, the effects of radiation on development, and the theory of X-chromosome inactivation.

CONTENTS:

L. S. Penrose, The Causes of Down's Syndrome. **Mary F. Lyon,** X-Chromosome Inactivation in Mammals. **Gordon C. Brown,** Recent Advances in the Viral Aetiology of Congenital Anomalies. **Robert L. Brent,** Immunologic Aspects of Developmental Biology. **F. Beck** and **J. B. Lloyd,** The Teratogenic Effects of Azo Dyes. **Samuel P. Hicks** and **Constance J. D'Amato,** Effects of Ionizing Radiations on Mammalian Development. **R. W. Smithells,** Drugs and Human Malfromations. References.
